WALLA WALLANS BOARDING THE W. W. V. T. CO'S TROLLEY CARS FOR MEADOR PARK
ON THE WALLA WALLA RIVER

About Bygone Walla Walla

The BYGONE WALLA WALLA Project is a local non-profit, non-commercial effort to build and share a visual history of Walla Walla.

What began as a retirement project in 2006 now has about 9,000 images in just over 1,000 topical posts on the blog. A new post and photo are added almost every day. The blog has hundreds of followers daily with well over a quarter-million views since its inception.

Bygone Walla Walla is a noncommercial effort to build a visual history of photos, maps, vintage ads, sketches, postcards and assorted memorabilia — just about anything that shows “the way it used to be around these parts.”

WANTED! If you have old snapshots (pre-1990) of Walla Walla area places and events that you would like to share in this project, please contact Joe to get them scanned in:

WW-FREE,
Community
Solar

Frederic Liebrand
Director

About WW-FREE

WW-FREE is a Washington state non-profit organization that administrates community solar projects. Community solar projects are privately owned renewable energy systems placed on local government property that qualify for increased monetary production incentives from the state of Washington. WW-FREE charges no fees for our work. Our officers take no compensation and have volunteered their efforts. Our goals are:

1. To raise environmental efficiency in public buildings which lowers the cost for our local municipalities to operate (your tax bill);
2. To raise money for scholarship endowments dedicated to lowering the cost for local children to go to college;
3. To enrich our community by investing and keeping money locally that otherwise would flow out of our area; and finally
4. To foster job training in tomorrow's energy and building technologies for our children.

To do this, we will operate a community solar project on your behalf. Your money will go to buy solar panels and inverters that turn sunlight into electrical power to be used by your local government. You will retain ownership of that equipment, and have a right to it or its fair value at the end of the project. In the meantime, you also will also have right to the Washington State production incentives for renewable energy, and to federal incentives for installing renewable energy.

The
Sherwood
Trust

Jock Edwards
Ex. Director

About The Sherwood Trust

Founded as a private foundation in 1991 by Don and Virginia Sherwood, the singular focus of the **Sherwood Trust** is for the Walla Walla Valley to reflect the highest, sustainable quality of life for everyone. In pursuing that mission, the Trust has adopted a grantmaking approach that mirrors the Tupelo Model for Community Development by investing in:

- Human Development –supporting continuing education through its Learning Center for Nonprofit Organizations
- Leadership Development—sponsoring a community leadership program that enlists up to 25 participants each year
- Organizational Development—making grants designed to build the capacity of nonprofit organizations
- Economic Development—primarily funding capital projects related to economic development and community infrastructure
- Community Development—“Helping people to help themselves.” An increasing focus on advocacy and community convenings by funding supportive infrastructure for community coalitions that are grassroots, inclusive, and formed to address civic issues
